

[illegible]

As the number of variables in the model increases, the model becomes more complex and the interpretation of the results becomes more difficult. The model is also more likely to be overfitted, which means that it is too closely tailored to the specific data set and may not generalize well to new data. To avoid overfitting, it is important to use a model that is as simple as possible while still capturing the essential features of the data. This is often achieved by using a model with a small number of variables and a simple functional form.
